- **No subscriptions, no costly memory cards, no PC required, just transfer & view!**

Bringing your digital lifestyle into view™

Finally there is a new way to display digital photos instantly. Just DirectConnect™ and view! Pacific Digital's new 8x10 MemoryFrame is a stand-alone, electronic "picture-frame" that requires no camera memory card, PC, printer, paper, ink or monthly subscription fee. Users can easily and quickly transfer photos, on the spot, directly from a digital camera or card-reader into MemoryFrame. Then they can immediately play them back - in a continuous slideshow of vibrant, high-resolution images - on MemoryFrame's 10.4" active-matrix screen. The MF-810S deluxe stereo audio model records voice narration or music to accompany the slideshow. In addition, it comes mounted into a standard 8x10 wood picture frame to create a handsome photo display for home or office on desk, shelf, or wall. The user can buy additional frames to match their décor. MemoryFrame stores 32-80 photos and allows you to select how long each image is displayed and what style of transition is used between each image! It is ideal for both home and office users to proudly display family photos on the desk, shelf, or wall. Also excellent for the business counter top to display special promotions.

The only product of its kind to be compatible with both USB cameras as well as USB card-readers for Compact Flash (CF), SmartMedia (SM), SecureDigital (SD), MultiMediaCard (MMC), MicroDrive, and MemoryStick memory cards, the Pacific Digital MemoryFrame™ operates with the vast majority of USB Mass Storage compliant digital cameras in use today.

The stylish design of the Pacific Digital MemoryFrame™ and its unique ability to use virtually any off-the-shelf wood 8x10 picture frame allows you to choose a frame that matches your décor, whether it be cherry wood, oak, pine, teak, walnut, etc. This unique feature allows the Pacific Digital MemoryFrame™ to make a handsome display in any home or office, suiting any motif. Includes one 8" x 10" picture frame (type may vary).

Digital PixMaster™ Software

For those who do use a PC, you can also create, name, save, hundreds of different slideshows for easy USB transfer to/from the MemoryFrame™.

Easily create professional looking photo slideshows. Choose the pictures, choose the effects & transitions and let Digital PixMaster™ do the rest. Pacific Digital developed the Digital PixMaster™ software specifically for the home digital photo enthusiast. PixMaster™ is an innovative solution that is incredibly easy to use, while offering key features, such as the ability to rotate photos, specify effects, and create/name/save unique slideshows from your vacations, sporting events, family functions, etc.

The bundled software easily allows you to create custom slideshows that integrate photos from both your camera as well as images received by email or stored in the "MyPictures" directory of your Windows® PC (or other directories). These slideshows can be quickly downloaded via USB to your MemoryFrame™ for instant viewing enjoyment.

MF-810S stereo sound version

During picture playback, voice or music audio clips can be played for each picture, in stereo, through built-in speakers. There are also VGA and audio out connectors so the unit can display on an external projector or flat-screen with audio played on externally powered speakers. The device features a two-position stand for either vertical or horizontal display, and with its easy-to-use on-screen menu system and multi-function control buttons, users can view digital camera or memory card contents at a glance with easy to view thumbnails, edit slide shows, select the time between image changes, add sound clips and fun transition display effects, delete images from slideshows, and much more. Manual image forward, pause, and reverse buttons and adjustable contrast are also provided. Security-lock-ready capability can keep it secure in busy business office environments.
